

“IT Forensics is one of the fastest growing areas of internet security. It impacts a broad range of organisations in their need to be prepared for the implications of a forensic investigation”

Every organisation needs to be prepared for a forensics investigation, with plans and policies in place that enable information and evidence to be recovered, preserved, analysed and provided for criminal and civil proceedings.

Sovereign Secures' highly qualified IT forensics team adhere to the Association of Chief Police Officers (ACPO) guidelines when carrying out a broad range of forensic investigations. We work closely with our clients and are aware of the sensitivities and pressure that a forensic incident or investigation can involve. Our team is regularly instructed in criminal and civil cases and works with the relevant bodies and authorities in identifying and interpreting all aspects of digital evidence. We are a trusted and accredited forensics provider, recognised and respected for the high quality of our work and involvement in many successful cases.

Our forensic consultants are skilled in the practice of collecting, analysing and reporting on digital information and evidence in order for it to be legally admissible. This can range from being used for organisations' internal investigations, to the detection and prevention of crime, civil proceedings, and disputes where evidence is stored digitally. Sovereign Secure works with a broad range of clients and cases, providing forensic services associated with the investigation of a wide variety of computer and IT crime, together with civil proceedings. Our team uses similar techniques and principles to data recovery, but with additional guidelines and practices designed to create a legal audit trail. Depending on each individual case, there may be a requirement for investigations to identify a broad range of evidence types — all of which must be retrieved through consistently high levels of methodology and applicable forensic tools.

E-Mail investigations

Industrial espionage investigations

SOVEREIGN SECURE

Whatever aspect of forensic investigations we are working on (including computer crime, cyber crime, network, database, mobile or email investigations) it is critical for the analysis of digitally-based data that the examination is carried out in a forensically-sound manner.

Our experts use a range of industry techniques which aim to preserve, recover and analyse the facts, to present them clearly without affecting or altering the evidence in any way. The results of the investigation are then clearly and concisely presented in a format that can be understood by a broad range of individuals.

With Sovereign Secure you will save time and effort, minimising the cost of achieving the very highest standards in the least possible time, giving you the ability and confidence to remain at the required level.

We know the importance of sourcing and securing established, experienced and professional security experts. Email or call us to discuss your requirements discreetly and in confidence.

We are ready to respond to your requirements.

WHY CONTACT SOVEREIGN SECURE

Sovereign Secure is a specialist security company developed, owned and managed by experienced and qualified security experts with significant global experience. We have two specialist offerings:

- Protection and Covert Security
- IT Security

Our highly trained team is experienced in a range of specialist security services, and our personal, consultative approach to clients' security requirements means we are able to provide bespoke security solutions, tailored to each client's needs
