

# PENETRATION TESTING AND VULNERABILITY SCANNING

**“If you want to stay in business, it’s essential that your company is secure. Sovereign Secure carries out a program of penetration tests and vulnerability scans to ensure that every area of your business and its practices are safe from attack”**

**At Sovereign Secure, our team of security professionals is highly experienced and PCI approved. We believe that no other company offers a more comprehensive service or goes deeper into your security than we do. Our service is comprehensive, always professional and sympathetic to your working environment.**

Sovereign Secure delivers a broad range of penetration testing and vulnerability scanning services. Whether the security threat is internal or external, we work closely with you to identify the potential vulnerabilities and testing requirements for your organisation, conducting the tests from our UK-based testing platform as well as making on-site visits to carry out internal assessments. We have a bespoke approach with all of our clients, and can work on a project-based or ongoing basis both in the UK and internationally.

Security breaches and attacks are a constant threat for any organisation — hackers are continuously targeting networks in order to find and exploit vulnerabilities, whether for malicious, financial or corporate espionage reasons. Our services cover all aspects of an organisation’s security including hardware (including mobile devices), applications, networks, and remote access. Our highly experienced team is accredited in deploying testing techniques and, where required, will source securely configured, necessary network and hardware components in deploying hardened systems. Our testing and scanning analysis includes recent critical fixes and failed and successful login attempts.

## KEY SERVICES

Web applications testing

Mobile devices and server hardening

Wireless networks scanning

Social engineering

Internal and external network testing

Social engineering

Databases access review and hardening

Web application code reviews

Remote access testing

# SOVEREIGN SECURE

Sovereign Secure is well aware that many organisations have a range of legacy remote access infrastructures, which dictate employee locations and device access, and can include VPNs, a mobile access gateway or a number of other solutions.

Regardless of which, our teams carry out a detailed review of associated risks prior to testing, and will provide the necessary solutions and recommendations.

In addition, our testing services also include social engineering techniques. Working closely with our client contacts and through prior agreement, our team have successfully accessed buildings, systems, data and passwords by exploiting human psychology rather than forced entry. Our findings and recommendations are provided to our clients, which can include improved building, systems or hardware security, and can extend to training employees in increasing awareness of genuine social engineering techniques

**We know the importance of sourcing and securing established, experienced and professional security experts. Email or call us to discuss your requirements discreetly and in confidence.**

**We are ready to respond to your requirements.**

## WHY CONTACT SOVEREIGN SECURE

Sovereign Secure is a specialist security company developed, owned and managed by experienced and qualified security experts with significant global experience. We have two specialist offerings:

- Protection and Covert Security
- IT Security

Our highly trained team is experienced in a range of specialist security services, and our personal, consultative approach to clients' security requirements means we are able to provide bespoke security solutions, tailored to each client's needs.
